

HYDRO-PRUFE® PVC WATERSTOP

PRODUCT DESCRIPTION

HYDRO-PRUFE® PVC Waterstop is an extruded PVC Waterstop used in the application of the **HYDRO-PRUFE® PVC 80 mil** waterproofing system. It is primarily used to create compartmentalization within the **HYDRO-PRUFE® PVC** waterproofing system in belowgrade applications. The compartments or segments create individual cells within the **HYDRO-PRUFE®** waterproofing system. These cells are designed to allow localized compartments and when the **Alko** injection hoses are placed within the cells it allows for future injection if the **HYDRO-PRUFE® PVC** system is breached or damaged. **Waterstop-B** or **Hydro-Gard Swell Tape** are adhered to the three sides of the **HYDRO-PRUFE® PVC** waterstop and will hydrate and swell when in contact with water closing off the compartments.

APPLICATION

Waterstop shall be heat welded in segments as determined by manufacturer and designer. Heat weld to surface of PVC sheet membrane in compartmentalized fashion.
